

Advanced Connector.

■ Benefits

Mission critical integrations to keep you moving.

Unison's Advanced Connector provides enhanced integration capabilities between Unison CLM and other enterprise systems, including financial systems, sales and opportunity tracking systems, business intelligence technologies, as well as automated purchasing and electronic signature solutions.

Integration

Powered by Talend, the clear leader for integration between contracts and financial systems

Multiple Connections

Allows connections to multiple systems—your ERP, BI Tool, and others—even multiple instances of a system

Cloud

Works with all leading Cloud Service Providers

■ Key Features

Advanced Connector ensures that information is passed easily between Unison CLM and your other critical systems.

- Powered by Talend, a single, unified platform for application integration
- Supports a full range of standard project numbering conventions
- Works with all leading Cloud Service Providers
- Standard integration capabilities to enable data flows between CLM and other enterprise systems or data repositories (“Enter data once, use everywhere”)
- SOA-compliant architecture fully supports web service integration with internal systems and other cloud hosted applications, no VPN or database to database connection required
- Standard APIs available for loading lists of Employee/Users, Customers, Vendors and other reference information
- Configurable data capture fields that allow easy extension of standard contract data to meet the needs of an integrated ERP or other system
- SAML capabilities
