Digital Signature

Background and Timing

Unison has added Digital Signature as an add-on to PRISM. The functionality is available in PRISM 7.4 service pack.

- PRISM Digital Signature is available as an extra cost add-on for agencies who subscribe to FedConnect or Insight
- The solution integrates with third-party Digital Signature Authorities
 - Currently the solution is available for DocuSign but can be extended to other tools
- PRISM Digital Signature supports unilateral or bi-lateral transactions
- Can be integrated seamlessly with all Financial Interfaces
- Support paperless contracting initiatives, increase auditability, and streamline government/vendor communications.

How it Works...

- New Agency/Site Configurations allow for configurations for Digital Signature
 - Awards/Agreements can be designated as Unilateral or Bi-lateral signature
 - CO can set an expiration date and route the document through the normal approval process
- Once all approvals are completed, the Award/Agreement is automatically sent for external signature
 - The order of external approvals (Finance, Vendor/Recipient Signature, CO/AO Signature) can be configured at Agency or Site
 - The order can be set separately for Procurement and Assistance separately
