

Unlock the power of 50 years of cost research with Unison TruePlanning[®] cost estimation software.

Predictive models, data analytics, and insights for streamlined hardware & software cost estimates.

Unison TruePlanning is the trusted choice for comprehensive cost estimation software, relied upon by top-tier government contractors and commercial organizations in the aerospace, defense, and information technology industries. With predictive models built on 50 years of rigorous cost research, our software empowers you to develop credible, data-driven cost estimates, giving you a competitive edge.

No matter what phase of the cost estimating process you're in, Unison TruePlanning provides an all-encompassing solution that seamlessly integrates hardware and software lifecycle cost estimates with advanced analytics and premium engineering services to deliver exceptional value.

Smart Decisions Made Easy.

Make defensible data-driven decisions with efficiency.

Bid confidently and win more business with well-informed cost estimates.

Increase transparency, manage risk, and optimize your finances.

Access domain expertise and premium services.

Streamline workflows and eliminate duplicative efforts with a centralized data repository.

Establish trust with project stakeholders/decision makers

The Impact of Unison TruePlanning: Estimate with Confidence™

Unison Cost Engineering has successfully trained thousands of users in hundreds of locations worldwide to develop robust cost estimates. Top aerospace and defense contractors routinely experience greater efficiencies by creating faster, more comprehensive estimates with TruePlanning.

Unified modeling capabilities enable unique project insights—prioritizing repeatability, credibility, and data-driven accuracy.

Embrace the future of estimation—bid farewell to Excel and homegrown systems and streamline your processes to win more business.

Our software combines decades of cost research and cutting-edge technology to future-proof your estimation processes and drive informed decisions. By integrating hardware and software lifecycle cost estimates, TruePlanning eliminates conflicting data, providing a clear and focused estimate or a comprehensive overview of your entire project.

Bid confidently, win more business, and make well-informed financial decisions with Unison TruePlanning.

Excel and homegrown systems are widely used tools for cost estimation. However, these antiquated, and manual solutions are error-prone and ineffective at producing consistent, dependable processes. While they may give estimators a sense of control and autonomy in the short term, they hinder the transfer of institutional knowledge to new team members, resulting in reduced efficiency in the long run.

No more guesswork or fragile spreadsheets—our software empowers you to streamline workflows, unlock hidden insights, and make informed decisions that give you a clear competitive advantage.
